This course is designed for high school and middle school CTE and content area teachers. Practical strategies, specific lessons, and activities will be developed to improve classroom performance and increase workplace employability skills with an emphasis on integrating real-world problem solving in teaching and learning. Participants will learn academic thinking and problem solving strategies to embed into existing curricula. Instructional strategies will include incorporating online technology tools to develop career awareness and learning problem solving skills. Participants will collaboratively create a unit of study using a problem-based learning format and write a reflection paper.
